Shopify and *Sage* Plugin

Through our **fenyaEDI** solution we provide a seamless plugin between Shopify and Sage, whereby we automatically sync:

- **Customer Orders.**
  - o Orders are directly imported into your ERP.
- **Product Information.**
  - o Which includes information such as pricing, specials and general product details.
- **Product Stock on Hand.**
  - o Multi-warehousing compatible.

This EDI solution connects your ERP to your Shopify based store and removes the gap between your ecommerce site and accounting software. Further to this, we provide a customised web portal whereby one can maintain oversight of the transactions between the two systems.

We have added Xero and QuickBooks to our Woo-Commerce and Shopify EDI integration platform.
