# Powering Your Operations

- Direct ERP integration – keep your stock data synced instantly with your ERP system.
- Real-time warehouse & bin control – manage inventory across multiple locations with precision.
- Batch, lot & serial tracking – trace every item from receipt to dispatch.
- Streamlined stock takes – simplify audits and maintain accurate counts.

## How It Works

- Move stock between warehouses & bins.
- Generate sales or purchase orders with correct stock allocation.
- Automatic ERP updates: invoices, POs, returns - all synced in real time.
- Maintain accurate stock levels at every step, from receipt to return.

## Key Advantages

- **Cut losses & errors:** Reduce human mistakes and prevent stock discrepancies.
- **Full traceability:** Generate clear reports that track every movement.
- **Always accurate:** Maintain up-to-date stock levels across all warehouses.
- **Seamless operations:** Sales, purchases, and returns flow directly into your ERP
- **Expandable with add-on modules:** Extend functionality with batch tracking, serial number tracking, and bin management.

# Base Modules

## ERP Integration

FCS integrates directly with the client's ERP system, ensuring inventory transactions and financial postings are synchronised in real time.

## Inter-Branch Transfers (IBT)

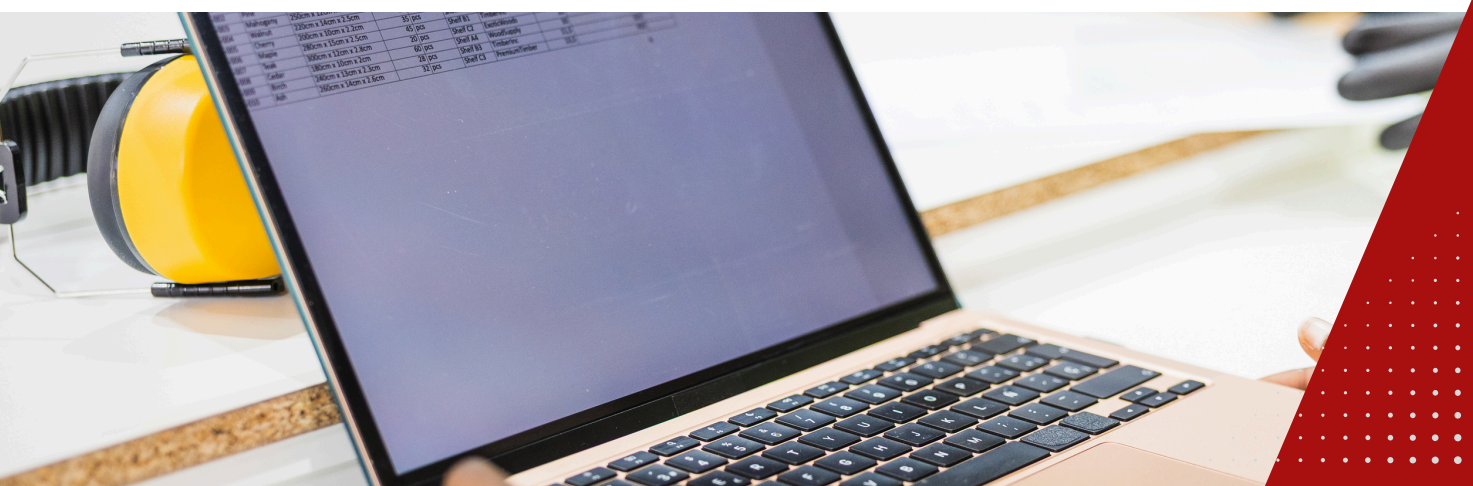

Ensures smooth, controlled stock flow across branches with full accountability.

- Generate stock requisitions between warehouse locations.
- Link requisitions to Goods-in-Transit and variance warehouses.
- Requests can be approved by Admin.
- Once approved, picking slips are generated to move stock from the source warehouse → Goods-in-Transit → destination warehouse.
- Any variances are automatically moved to the variance warehouse.

## Inventory Adjustments

Keeps ERP records aligned with real-world stock movements.

- Process adjustments across bins, batches, and serials.
- Process adjustments seamlessly with full traceability.
- Automatically create journal entries in your ERP for accurate records.

## Min & Max Reporting

Ensures proactive inventory management by monitoring minimum and maximum stock thresholds.

- Define minimum and maximum stock levels per item.
- Receive alerts when stock falls below minimum or exceeds maximum.
- Automate replenishment recommendations.
- Maintain optimal stock levels across warehouses.
- Prevent overstocking and stock-outs with real-time monitoring.

## Multi Warehouse Functionality

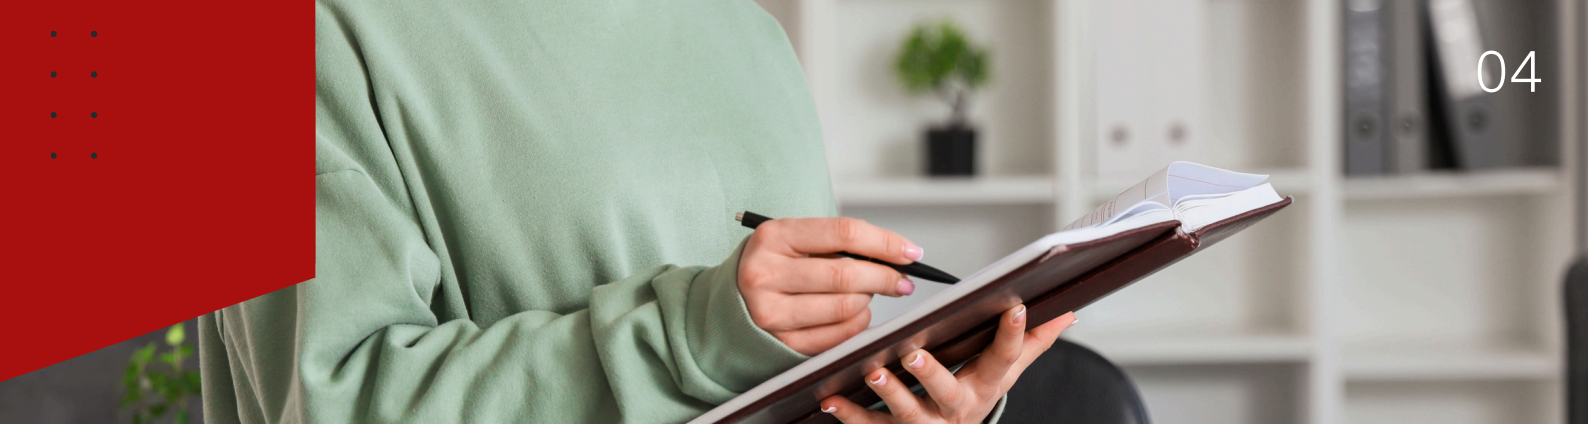

Enables organisations to manage inventory seamlessly across multiple warehouse locations, with full warehouse-level control.

- Manage stock across multiple warehouse locations.
- Perform stock transfers between warehouses.
- Execute Inter-Branch Transfers (IBT) with full accountability.
- Track and control inventory at warehouse level.
- Monitor real-time stock levels across all warehouses.

## OrderPad

Allows users to capture and process key sales and purchasing transactions with seamless ERP integration.

- Generate Sales Orders and Purchase Orders.
- Once posted:
  - A corresponding Tax Invoice or Goods Received Note is created in the ERP.
  - Stock quantities are adjusted in both FCS and the ERP.
  - Inventory is allocated to the appropriate warehouse and/or bin location.
  - The transaction is posted to the ERP.
  - Stock levels are updated and maintained within FCS.

## Reporting Tools

FCS provides comprehensive reporting capabilities, giving organisations clear visibility into inventory and operational performance.

- Generate detailed inventory and transaction reports.
- Monitor stock movements across warehouses and bins.
- Access real-time dashboards for operational insights.
- Support audit trails and compliance reporting.
- Customisable reports to match business requirements.

## Stock Take

Simplifies audits and keeps inventory records precise.

- Generate an inventory snapshot for accurate counts.
- Print count sheets to guide the process.
- Capture counted quantities and instantly view variance reports.
- Update stock levels with verified counts.

## Stock Transfers

FCS provides tools to manage stock control and reconciliation, ensuring accuracy and real-time visibility across warehouses and bins.

- Stock take functionality for accurate inventory counts.
- Inventory variance reporting to highlight discrepancies.
- Real-time inventory adjustments for immediate corrections.
- Move inventory between warehouses and bin locations outside the ERP interface.
- Once transactions are finalised and posted:
  - FCS is updated immediately.
  - Live stock reporting becomes available.

# Add-On Modules

FCS also offers optional add-on modules to tailor the system to your business needs.

## Batch Tracking

Guarantees compliance and traceability for batch-sensitive items.

- Flag items as batch/lot controlled.
- All stock movements require batch/lot selection for accuracy.
- Expiry dates are supported and tracked.
- FIFO principle applied to stock movements.
- Detailed reporting on batch status and expiry movements.

## Bin Management

Optimises warehouse space and speeds up picking accuracy.

- Allocate warehouses as bin-tracking locations.
- Manage multiple bin locations per product.
- Link products to specific bins for organised storage.
- Monitor and maintain bin levels.
- Print bin locations on picking and receiving slips for clarity.

## Serial Number Tracking

Provides complete visibility and control over serialised inventory, ensuring traceability and compliance across all stock movements.

- Flag items as serialised for full traceability.
- All inventory movements require entry or selection of serial numbers.
- Track serial numbers through every stage: receiving, transfers, sales, and returns.
- Reporting available by transaction, warehouse, and serial number status.
- Supports audit trails and compliance requirements with detailed history.
- Enhances accuracy in warranty, service, and product lifecycle management.

## Scanner Connector

This module enables the inclusion of the FenyaWMS Android application that enables mobile scanning or capturing of stock movements.

- Capture and process:
  - Incoming stock
  - Outgoing stock
  - Inter-Branch Transfers (IBTs)
  - Warehouse Transfers
  - Stock Takes
